VPP AI Agent Challenge

~ From AI to AX ~

Competition Overview

1. Background and Objectives

1 Building a Case Model for AX

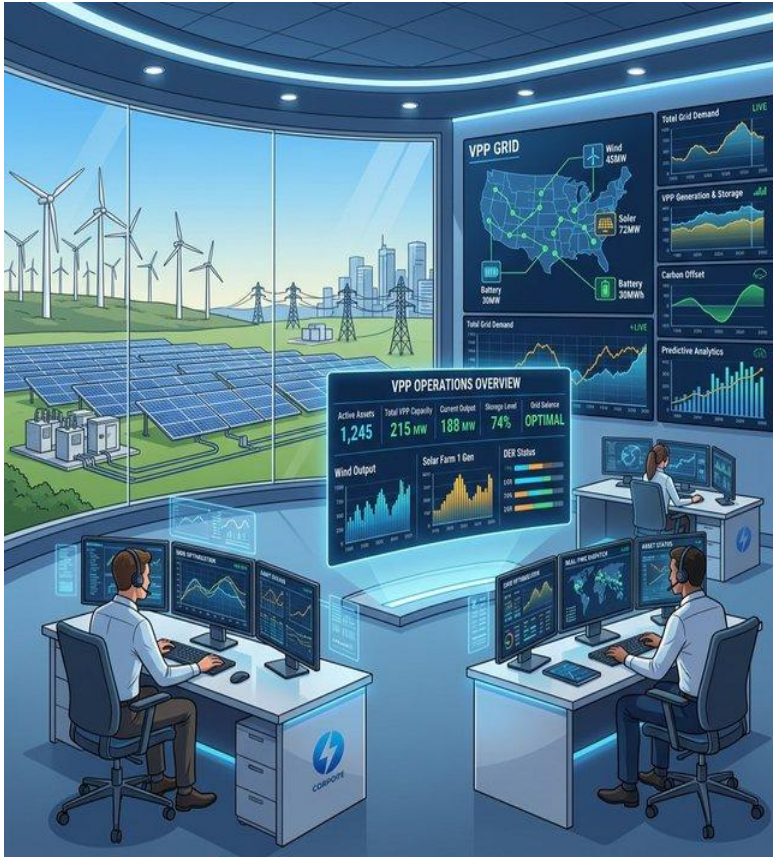
Aims to shift from "AI Introduction to AI Transformation (AX)" using an AI-driven VPP construction management system as a theme.

2 Automating Gritty Data Organization

Designing a loop where AI organizes operational data (like inspection logs), preventing GIGO and improving convenience.

3 Discovering and Nurturing AX Talent

Nurturing engineers who combine AI development skills with a deep understanding of energy business operations.



2. About the Data

Multi-modal As-built Documents

Targets scattered files such as PDFs, images, and Excel sheets. The AI agent retrieves this data from Google Drive.

Masking of Confidential Info

Confidential information such as company and personal names is redacted in advance.

Public and Private Data

Consists of "Public Data" for development and "Private Data" for the final evaluation.

3. What Participants Will Do

Development of an Autonomous AI Agent (Multi-stage Simulation)

The agent progresses through the following 3 phases on the provided simulator.

1. Observability

Automatic tagging and extraction of essential data from scattered asset data like PDFs and images.

2. Action Generation

Understanding regulations and data to plan and execute correct operation and maintenance (O&M) actions.

3. Verifiability

The agent judges the validity of its plans and actions itself to progress appropriately.

4. Rules and Evaluation

Teams submit an executable AI agent. TasDG will run it on the simulator and evaluate the results.

3 Axes of Scoring

Accuracy	**Precision & Meaning match**
Efficiency	**Latency & Tokens**
Robustness	**Error handling**

Qualitative Evaluation

- **Planning**
- **Self-correction**
- **Memory (RAG)**
- **Monitoring**
- **Safety**

2-Stage Submission

1st: Pre-submission for test case checking
2nd: Final submission for the actual evaluation

Deliverables

Source code of the executable agent
Presentation slides

5. Schedule

TAS Design Group

3/29~

Mid-term Review

Scheduled for March 29 - April 3, 2026

4/12

Final Submission Deadline

April 12, 2026 (Sun) 23:59

4/18

Results Presentation

April 18, 2026 (Sat) at DevDay2026
